

General information: Can I block copying files to pendrives or USB drives?

You can use Disk restrictions feature (on Disk restrictions page in client setup) and create a rule to prevent customers from copying files to USB pendrives and disks:

Rule name: No USB copy

Protection: Create & Write

Include file pattern: %FLOPPY% (prevent copying all files to all removable drives)

Exclude file pattern:

Include process pattern: * (all programs)

Exclude process pattern:

Since CafeSuite 3.52.4 you can replace %FLOPPY% with %REMOVABLE% that means the same.

You could also create a separate charging rate where this restriction would be disabled and change the rate if the customer is allowed to copy files.

Unique solution ID: #1187
