

# General information: Can I use CafeSuite with Deep Freeze or other instant recovery software and hardware?

Yes, CafeSuite can be used together with Deep Freeze and other instant recovery solutions. You just need to remember to quit protected/frozen mode (thaw PCs) when you upgrade CafeAgent on client workstations. You can set CafeAgent to automatically reboot after session is over, so that PC is restored to original state (Automation/End page in client setup). We also advise to enable option Get updated configuration from server once connected on Miscellaneous page in client setup so that you don't need to thaw PCs to update CafeAgent configuration.

We highly recommend using [CafeSuite Instant Recovery Module](#). It works the same way as DeepFreeze and it can also be controlled directly from CafeSuite.
