

# CyberPrinter: How to install CyberPrinter?

Here are the steps necessary to install CyberPrinter in your network:

1. Download the latest version of CyberPrinter from our website.
2. Install the downloaded package on the main (server) computer. Choose the SERVER installation option.
3. Install the downloaded package on the workstations. Choose the CLIENT installation option.
4. CyberPrinter should detect your network settings automatically and connect the workstations to the server.
