

# CyberPrinter: How do I set the pricing for the printouts?

You can set up prices for different printers in CafeStation configuration on Printing control page. Just select printer from the list, enable Charge for printing with this printer and click Add to add new price by entering minimum number of pages, cash charge and alternatively time charge if you want to deduct time from time accounts when customers print.

ps.

Please note that in CyberPrinter configuration you can also set up pricing, but CafeSuite will ignore it. So you don't need to set it up again in CyberPrinter. It's only there because, CyberPrinter can also be used on it's own.
