

CyberPrinter: CyberPrinter only detects printouts from administrative account - when i use the limited account there is no registration of any printing activity though the printing actually occurs. What can I do?

At the end of installation of CyberPrinter there is a checkbox Use with limited accounts. It's enabled by default in the installation package available on our website, but I it used to be disabled on the installation package from Serpol (the original producer of CyberPrinter). Please make sure that it's selected - it's required when you use limited accounts.
