

# CafeStation: How to change group of some computers?

Workstations can be assigned into groups in CafeStation. Each workstation in group shares the same configuration and charging rate.

To assign workstation to another group please:

- select workstation in CafeStation
- click menu List/Edit computer
- type different Group name and click OK

Now to change client settings for this group please:

- select the same workstation in CafeStation
- go to menu Program/Client setup
- newly created group should be selected as current Configuration on the bottom of the settings window
- edit settings and press OK to save this group

Program will create a new ini file corresponding to the name of the group and also update CafeAgent.ini file as the last saved configuration. This configuration will be used for all PCs that belong to the same group.

Unique solution ID: #1200
