

# Other questions: How can I bypass or unlock the station if the CafeStation server is down or crashed?

You can close CafeAgent by clicking Alt-F4 when PC is locked and confirming your password. However you can also use a secret account feature - in client setup on Logon system page you can specify secret user username and password. You can log on to this user even if there is no connection with a server. Please note that there is no time limit enforced for that user.
